Subject Index of Volume 17

Air conditioning
  residential, in developing countries, 213
Air pollution
  effect of, and ventilation on perceived indoor air quality in five town halls; comments on. The possible role of TVOC in the indoor environment, 253
  effect of, and ventilation on perceived indoor air quality in five town halls; reply to comments on, 255
Airflow
  influence of air infiltration on, in a ventilated isothermal two-zone enclosure, 43
Aluminum windows
  measured field performance of, in Kuwait, 75
Ambient temperatures
  high summer, statistical and persistence analysis of, in Athens for cooling purposes, 243

Building ventilation
  computer-aided, system design: a system-theoretic approach, 147
Built environment
  scale modelling of the, 7

Controller
  dynamic performance of a sub-optimal, 117
CO_2 concentration
  demand controlled ventilation by, comparison of simulated energy savings in air auditorium space, 87
Cooling systems
  passive and low-energy, performance and applicability of, 177

Energy-efficient housing
  gas-heated, in France: predicted and observed performance, 131
Energy performance
  analysis of, of office buildings in Montreal in 1988, 63
Energy savings
  and economics of retrofitting single-family buildings, 297
  simulated, comparison of, in auditorium space: demand controlled ventilation by room CO_2 concentration, 87
  through intermittent evaporative roof cooling, 35
Environment
  built, scale modelling of the, 7
Evaporative coolers
  a pump economizer for, 55
Evaporative roof cooling
  intermittent, energy saving through, 35

Factors
  expanded research on human shape, for inclined surfaces, 283
  mean projected area, algorithms for the calculation of, of seated and standing persons, 221

Gas-heated housing
  energy-efficient, in France, predicted and observed performance, 131

Heat
  deferred, theoretical management of, supplied by a composite Trombe wall using a porous concrete, 201
Heat dissipation
  the use of atmospheric heat sinks for, 321
Heat loads
  a study of reducing, on tents due to solar insolation, 13
Heat sinks
  atmospheric, the use of, for heat dissipation, 321
Heat transfer
  dynamic analysis of, in buildings with special emphasis on radiation, 231

Ice banks
  refrigeration systems based on short-term storage by means of, 1
Infiltration
  air, influence of, on airflow in a ventilated isothermal two-zone enclosure, 43
Insolation
  solar, a study of reducing heat loads on tents due to, 13

Mean projected area factors
  algorithms for the calculation of, of seated and standing persons, 221

Office buildings
  analysis of the energy performance of, in Montreal in 1988, 63

Passive cooling systems
  low-energy and, performance and applicability of, 177
Passive solar devices
  on a Markovian approach for modeling, 103
Passive solar heating
  a multicomponent PCM wall optimized for, 259
Performance(s)
  and applicability of passive and low-energy cooling systems, 177
  dynamic, of a sub-optimal controller, 117
  energy, analysis of, of office buildings in Montreal in 1988, 63
  measured field, of aluminium windows in Kuwait, 75
  of radon control systems, 157
  predicted and observed: energy-efficient gas-heated housing in France, 131
  relative thermal, of south walls in winter, 313

Elsevier Sequoia, Lausanne

Phase-change-material wall
a multicomponent, optimized for passive solar heating, 259
Pipe networks
analysis of, including pumps, 141
Pump economizer
for evaporative coolers, 55
Pumps
analysis of pipe networks including, 141

Radiation
dynamic analysis of heat transfer in buildings with special emphasis on, 231
Radon control systems
performance of, 157
Refrigeration systems
based on short-term storage by means of ice banks, 1
Retrofitting
energy savings and economics of, single-family buildings, 297
Roof cooling
intermittent evaporative, energy saving through, 35

Shading coefficients
development of a device for measuring solar heat gain and, of windows in scale models, 271
Solar devices
passive, on a Markovian approach for modeling, 103
Solar heat gain
development of a device for measuring, and shading coefficients of windows in scale models, 271
Solar heating
passive, a multicomponent PCM wall optimized for, 259
Solar insolation
a study of reducing heat loads on tents due to, 13

Temperatures
high summer ambient, statistical and persistence analysis of, in Athens for cooling purposes, 243
Tents
study of reducing heat loads on, due to solar insolation, 13
Thermal behavior
of a concrete 'finned' wall in a hot–arid zone, 331
Thermal performances
relative, of south walls in winter, 313
Thermal static characteristics
of buildings, dynamic model identification applied to the measuring of, 21
Transwall
optimum distribution of water-wall thickness in a, 97
Trombe wall
composite, theoretical management of deferred heat supplied by a, using a porous concrete, 201

Ventilated enclosure
isothermal two-zone, influence of air infiltration on airflow in a, 43
Ventilation
demand controlled, by room CO_2 concentration, comparison of simulated energy savings in an auditorium space, 87
Ventilation
effect of, and air pollution on perceived indoor air quality in five town halls; comments on. The possible role of TVOC in the indoor environment, 253
effect of, and air pollution on perceived indoor air quality in five town halls; reply to comments on, 255
Ventilation system design
computer-aided building, on system-theoretic approach, 147

Wall(s)
concrete 'finned', thermal behavior of, in a hot–arid zone, 331
south, relative thermal performances of, in winter, 313
Water-wall thickness
optimum distribution of, in a transwall, 97
Windows
aluminium, measured field performance of, in Kuwait, 75
development of a device for measuring solar heat gain and shading coefficients of, in scale models, 271
